

START WITH AN IGS < 45 COMMUNITY. THEN ASK..

Place

- *If healthcare exists, why might it still be hard to reach?*
- What role do housing stability, transportation, or physical distance

Economy

- *Even when people are working, why might care still be unaffordable or delayed?*
- How do wages, job stability, or local economic activity show up in

Community

- *When services are available, what influences whether people actually use them?*
- How do trust, awareness, education, or social networks affect outcomes?
- What happens to access during moments of stress or disruption, and how does the community respond?

Use data to explain the “why.” Then consider where local, community-based solutions could realistically play a role.

DATA IS MORE THAN NUMBERS—IT’S POWER FOR CHANGE

What is Data Analysis?

Data analysis is the process of collecting, cleaning, and interpreting data to uncover patterns, generate insights, and guide smarter decisions. It transforms raw numbers into meaningful stories—helping organizations solve problems, forecast outcomes, and create real change.

From Data to Decisions

- Collect - Gather raw information from multiple sources.
- Analyze - Clean, explore, and uncover patterns that matter.
- Act - Turn insights into smarter strategies, solutions, and impact.
